EXPERIENCE

JISR | SENIOR SOFTWARE ENGINEER

Oct 2025 - Present | Remote

- Led a team of **4** engineers architecting and shipping a reusable, policy-driven approvals/workflow engine serving **500+** enterprise customers; designed versioned REST APIs with backward compatibility and mentored engineers on system design across 2-week Agile sprints.
- Built auto-approve / auto-reject automation that removed human bottlenecks from the critical path, cutting approval wait time from hours–days of manager dependency to **~0s** for eligible requests and materially improving end-user UX across leave, finance, and HR flows.
- Eliminated **N+1** query hotspots in workflow resolution and migration paths via bulk SQL, preloads, and batched writes, reducing DB round-trips by **~80–95%** on high-traffic approval endpoints and improving **p95** latency under multi-tenant load.
- Triaged and resolved **50+** production defects / Rollbar incidents in the approvals stack (empty approver cycles, draft/active invariants, migration edge cases), cutting recurring error volume and preventing approval failures at org-fleet scale.
- Engineered mission-critical billing platform (Ruby on Rails, PostgreSQL) processing daily financial transactions for **4,000+** organizations; implemented ACID-compliant atomic transactions for seat transfers and subscription synchronization; structured a 3-tier hierarchical billing model with zero revenue leakage; automated reconciliation reducing manual corrections by **95%**.

BNY | SOFTWARE DEVELOPMENT ENGINEER 2

Mar 2024 - May 2025 | Pune, India

- Spearheaded architecture and development of ODS Studio, a no-code/low-code data platform serving **50K+** employees; deployed event-driven microservices architecture using Apache Kafka and PostgreSQL; drove infrastructure cost optimization reducing annual recurring spend from **\$19M to \$5M (74% reduction)**
- Architected **8+** production-grade microservices (Java 17, SpringBoot) implementing event-driven Kafka-based data pipelines; processed **43K+** daily requests ingesting datasets into centralized PostgreSQL data lake ensuring sub-second query performance; ensured ACID compliance across distributed transactions
- Partnered with analysts and ops teams to architect data pipelines replacing fragile ETL processes; improved system reliability from **96% to 99.5%** uptime; reduced data pipeline failures by **40%**; created schema evolution and versioning strategies supporting **12+** downstream microservices
- Accelerated developer testing cycles by **60%** with internal MQ message simulator removing external dependencies; quashed costly testing bottlenecks and enabled parallel development workflows
- Automated AI-driven test data generation using machine learning; reduced new engineer onboarding time by **40%**; eliminated reliance on domain experts for test scenario creation enabling faster productivity ramp

BNY | SOFTWARE DEVELOPMENT ENGINEER 1

Jul 2022 - Mar 2024 | Pune, India

- Revamped Angular/TypeScript UI screens for ODS Studio improving user efficiency by **20%**; collaborated with backend teams to optimize API performance through efficient data-loading patterns
- Created a centralized logger service layer (Java, Spring Boot) with AWS S3 connectors for secure, scalable data retrieval; integrated with existing microservices reducing logging overhead by **25%**
- Ranked **1st** among **230** new graduate engineers in Secure Code Warrior tournament at BNY; demonstrated expertise in secure coding practices and algorithm optimization

STANDARD CHARTERED GBS | SOFTWARE ENGINEERING INTERN

May 2021 - Aug 2021 | Remote

- Analyzed existing ETL processes and identified open-source alternatives reducing operational costs by **40%**; evaluated trade-offs between commercial and open-source tools recommending cost-effective solutions used by production systems
- Engineered Grafana dashboards (Python, Prometheus) for ETL metrics with Oracle DB integration; replaced Grafana Enterprise eliminating **\$100/user** licensing costs and reducing monitoring tool expenses by **60%** (supporting **80+** monitoring users)
- Won 1st place in Design Thinking challenge (**80 interns, 16 teams**) at Standard Chartered; developed and presented innovative solutions via structured technical pitch; solution adopted for consideration in product roadmap

EDUCATION

DELHI TECHNOLOGICAL UNIVERSITY (FORMERLY DCE) | NEW DELHI, INDIA

B.Tech. in Computer Science | Aug 2018 – May 2022

GPA: **8.74/10.0**

SKILLS

- PROGRAMMING LANGUAGES: C++, Python, Javascript, Java, Ruby, Go
- BACKEND FRAMEWORKS & TECHNOLOGIES: SpringBoot, Ruby on Rails, REST API Design and Versioning, Microservices Architecture, Event-Driven Systems, ACID
- DATABASES & MESSAGING: PostgreSQL, MySQL, Redis, Apache Kafka, Firebase
- INFRASTRUCTURE & DEPLOYMENT: AWS (EC2, S3, Lambda, RDS, APIGateway, SQS), Docker, Kubernetes, CI/CD, Linux, Splunk, Datadog, Grafana, Postman, Git
- ARCHITECTURE & DESIGN: System Design, Distributed Systems, OOP & Design Patterns, Scalable Architecture, Production Reliability

PROJECTS

GYM-CONNECT (Alpha Testing)

<https://github.com/shubham-godleon/gym-connect>

- Full-stack social fitness platform: Designed Spring Boot API (Java 17, Hibernate/JPA, PostgreSQL) with optimized schema for users, friendships, check-ins, and reactions
- Built React Native frontend (Expo, Redux Toolkit, Supabase Auth, Firebase Cloud Messaging) enabling real-time social interactions and notifications
- End-to-end ownership of backend architecture, database design, and mobile implementation; demonstrates full-stack engineering capabilities

SAATHI (Open Source)

<https://github.com/shubham-godleon/saathi>

- Shipped production React Native AAC app supporting 10 Indian languages with text-to-speech synthesis for autistic and non-verbal individuals; zero subscription model prioritizing accessibility for underserved communities
- Pioneered fully offline-first architecture eliminating backend dependency; integrated custom card creation with one-tap auto-translation via Google Translate API enabling seamless multi-language communication
- Open-source (MIT license) currently in Google Play closed testing (15+ beta testers); demonstrates full-stack development with social impact focus and production shipping capability
