PROJECTS

GYM-CONNECT (In Development)

github.com/shubham-godleon/gym-connect

- Created a full-stack social fitness mobile app from scratch, independently owning backend architecture, database schema, and mobile client.
- Developed a RESTful Spring Boot API (Java 17) with Hibernate/JPA on Supabase PostgreSQL, modeling users, friendships, check-ins, and reactions.
- Built the React Native (Expo) frontend with Redux Toolkit, Supabase Auth, and Firebase Cloud Messaging for push notifications.

SKILLS

PROGRAMMING

- C++ • Python • Javascript • Java
- Ruby on Rails • Go

TOOLS / FRAMEWORKS

- Github • Gitlab • Gitbash • AWS • S3
- EC2 • Lambda • Splunk
- Postman • Datadog • Docker
- AWS APIGateway • Copilot • Cursor
- Claude Code

BACKEND TECHNOLOGIES

- SpringBoot • MySQL • PostgreSQL
- Apache Kafka • Redis • MQs

FRONTEND TECHNOLOGIES

- Angular • HTML • CSS

EXPERIENCE

JISR | SENIOR SOFTWARE ENGINEER

Oct 2025 - Present | Remote

- Led a team of 4 engineers to design and roll out a reusable approvals/workflow engine for HR and payroll flows, standardizing workflow resolution across multiple approval use cases.
- Drove architecture documentation, and focused test coverage for the workflow platform, producing 900+ lines of technical docs/specs to accelerate adoption and reduce implementation ambiguity.
- Designed and implemented a Ruby-based subsidiary billing platform for 4,000+ small to large organizations, supporting 3 hierarchical billing models, pooled seat allocation, and automated reconciliation with atomic seat-transfer and parent-child subscription sync workflows

BNY | SOFTWARE DEVELOPMENT ENGINEER 2

Mar 2024 - May 2025 | Pune, India

- Spearheaded development of ODS Studio, a no-code/low-code data platform used by 50K+ employees, and contributed to migration efforts reducing recurring platform costs from cutting recurring costs from \$19M to \$5M annually
- Architected 8+ production-grade microservices (Java, SpringBoot) for ingestion of datasets, transformation, and metadata management into a centralized PostgreSQL-backed data lake, ensuring scalability and modularity
- Partnered with analysts and ops teams to replace fragile ingestion pipelines with an event-driven MQ/Kafka architecture, improving reliability and debuggability.
- Enhanced observability with custom Splunk dashboards and alerts, slashing triage time for config/schema issues by 30%
- Accelerated developer testing cycles by 60% with an internal MQ message simulator that removed external dependencies
- Automated AI-driven test data generation, cutting onboarding time by 40% and reducing reliance on domain experts

BNY | SOFTWARE DEVELOPMENT ENGINEER 1

Jul 2022 - Mar 2024 | Pune, India

- Redesigned Angular/TypeScript UI screens in ODS Studio, boosting user efficiency by 20%
- Implemented logger service layer (Java, Spring Boot) with AWS S3 connectors for secure data retrieval
- Authored comprehensive unit tests (JUnit, Mockito, Jasmine, Karma), lifting code coverage above 85%
- Ranked 1st among 230 new grad engineers in a Secure Code Warrior tournament at BNY

STANDARD CHARTERED GBS | SOFTWARE ENGINEERING INTERN

May 2021 - Aug 2021 | Remote

- Analyzed ETL processes and identified open-source alternatives, lowering processing costs
- Built Grafana dashboards (Python, Prometheus) for ETL metrics and integrated with Oracle DB, replacing Grafana Enterprise and saving 100 dollars/user
- Won 1st place in a Design Thinking challenge among 16 teams (80 interns) at Standard Chartered, presented a creative solution via structured PPT pitch
